

The Traffic Management Act requires that local authorities coordinate street and road works with their neighbours, the Highways Agency, the utilities companies, Police authorities and emergency services. All neighbouring authorities surrounding Lincolnshire uses Elgin to provide coordination between agencies.

The Electronic Local Government Information Network website.

The Elgin website provides an up-to-date interactive map of current and planned works on the road for a large area of the UK. Elgin is operated by Jacobs on behalf of participating local authorities. The information on Elgin is kept current by automatic data feeds from local authorities' streetworks registers and the Highway Agency.

Location of Roadworks - not all roadworks are positioned accurately.

The information is supplied by utility companies and local authorities. Current legislation only requires location by road name and exact map reference location is optional. Consequently roadworks symbols are located at the end of the named roads unless a map reference is provided. It is anticipated that new regulations will make provision of map co-ordinates to be mandatory

e-government legislation.

Elgin fulfils local authority's obligations under e-government legislation to publish streetworks information on the web. Elgin will soon provide access to information on bridge locations including height and weight restrictions, active diversion routes, and many other categories.

You can find all registered roadworks in Kent at:
